DETAILED ACTION

This Office Action is in response to:

03/07/2006 - Applicant response. 12/11/2006 - Non-final rejection.

Claim Objections

1. The amendments submitted 03/07/2007 are sufficient to overcome the objections made in the previous office action.

Claim Rejections - 35 USC § 112

2. The amendments submitted 03/07/2007 are sufficient to overcome the rejection made in the previous office action.

Response to Arguments

3. Applicant's arguments with respect to claims 1-23 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claims 1, 3, 9, 12, 13, 18, 19 rejected under 35 U.S.C. 102(b) as being anticipated by Weiner et al. (US 5,643,326).

Regarding claims 1, 12, and 19, Weiner discloses the same invention substantially as claimed, including an atrial detector 902 (Figure 9) and R wave detector 920, and a rate limit circuit (Figure 2) that determines a minimum RA interval beginning with an R wave and an end (abstract; Col. 6, lines

23-31, 52-63), determines if the end of the escape interval (Col. 5, lines 17-18) is before the end of the minimum RA interval 912/934 (Col. 6, lines 23-31, 52-63; Figure 9), and if it is, extends the escape interval so that its end coincides with the end of the minimum RA interval.

Regarding claims 3 and 13, Weiner discloses a dual chamber pacing device and sensing the R wave with a ventricular electrode channel (Figures 1, 2).

Regarding claims 9 and 18, Weiner discloses a rate-responsive mode (abstract).

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 8. Claims 1, 2, 4, 5, 10, 12, 14, 15, 16, 19-21 rejected under 35 U.S.C. 103(a) as being unpatentable over Sloman (US 6,101,416) in view of Weiner et al. (US 5,643,326).

Regarding claims 1, 2, 12, 14, and 19, Sloman discloses the same invention substantially as claimed, including detecting an atrial activation (Col. 7, lines 13-39), and detecting a far-field R wave (Col. 4, lines 35-50). Sloman does not disclose a rate limit circuit. However, Weiner discloses a rate limit circuit (Figure 2) that determines a minimum RA interval beginning with an R wave and an end (Col. 6, lines 23-31, 52-63), determines if the end of the escape interval (Col. 5, lines 17-18) is before the end of the minimum RA interval 912/934 (Col. 6, lines 23-31, 52-63; Figure 9), and if it is, extends the escape interval so that its end coincides with the end of the minimum RA interval, for the purpose of eliminating the possibility of competitive atrial pacing (Col. 1, line 48). Therefore, it would have been obvious to one with ordinary skill in the art at the time the invention was made to include the rate limit circuit of Weiner with the device of Sloman for the purpose of eliminating the possibility of competitive atrial pacing.

Regarding claims 4, 15, and 20, Sloman further discloses a window delay between the delivery of the atrial stimulation pulse and generation of the far-field signal, which is considered equivalent to Applicant's blanking interval commencing with detection of the atrial activation and ending prior to detection of the R wave (Col. 9, lines 8-29).

Regarding claims 5, 16, and 21, Sloman further discloses dynamically varying the blanking interval (Col. 6, lines 9-36; Figures 4 and 5).

Regarding claim 10, Sloman further discloses a morphology detector (Col. 5, lines 46-64; Col. 9, lines 30-43; Figure 3).

9. Claims 6, 7, and 22 rejected under 35 U.S.C. 103(a) as being unpatentable over Sloman (US 6,101,416) and Weiner et al. (US 5,643,326) as applied to claims 4 and 20 above, and further in view of Sholder (US 5,334,220).

Art Unit: 3766

Sloman and Weiner do not disclose a first blanking period duration responsive to intrinsic atrial activity shorter than a second blanking period duration responsive to paced atrial activity. However, Sholder teaches using a PV interval that is shorter than an AV interval, in order to account for the latency time between applying an A-pulse and the atrial tissue responding with depolarization (Col. 8, lines 28-33). Therefore, it would have been obvious to one with ordinary skill in the art at the time the invention was made to include the PV interval shorter than the AV interval of Sholder with the modified device of Sloman and Weiner, in order to account for the latency time between applying an A-pulse and the atrial tissue responding with depolarization.

10. Claims 8, 11, 17, and 23 rejected under 35 U.S.C. 103(a) as being unpatentable over Sloman (US 6,101,416) and Weiner et al. (US 5,643,326) as applied to claims 1, 12, and 19 above, and further in view of McClure et al. (US 6,711,438).

Sloman and Weiner do not disclose a refractory period or a revised refractory period.

However, McClure shows a PVARP and PVAB, which are considered equivalents of Applicant's refractory period following detection of atrial activation, and also shows a T-wave blanking interval, which is considered equivalent to Applicant's revised refractory period, for the purpose of determining the true atrial rate (Col. 4, lines 8-38, 41-53; Figure 5). Therefore, it would have been obvious to one with ordinary skill in the art at the time the invention was made to include the refractory and revised refractory periods of McClure with the modified device of Sloman and Weiner, in order to determine the true atrial rate.

Art Unit: 3766

Conclusion

11. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eugene T. Wu whose telephone number is (571) 272-3109. The examiner can normally be reached on M-F: 9 AM - 5 PM EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Carl Layno can be reached on (571)272-4949. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
